## E-WASTE – ELECTRONICS RECYCLING PROGRAM

**What is E-Waste?** E-Waste is just about anything electricity runs through. E-waste is a popular, informal name for electronic products nearing the end of their “useful life”. Computers, televisions, VCRs and more listed below are common electronic products. Many of these products can be reused, refurbished, or recycled. Unfortunately, electronic discards is one of the fastest growing segments of our nation’s waste stream. Many components or electronic equipment – including metals, plastic and glass – can be reused or recycled, while others may present environmental hazards if not managed correctly. It is our goal at LRI to manage this ever increasing waste efficiently and effectively.

### Classifications of E-Waste:
