LRI Environmental Policy for County-Owned Facilities

LRI is proud of our accomplishments and continues to be a partner in preserving and protecting the environment. We are pleased to provide such a valuable service to our community, therefore, LRI holds to the principle that we preserve, protect and enhance the quality of life by creating sustainable, comprehensive solutions to Solid Waste Handling. As a leader in the solid waste industry, we offer opportunities to reduce, reuse and recycle unwanted materials. We are committed to utilizing the latest and best management practices as demonstrated in our state-of-the-art landfill design, transfer stations, recycling facilities, compost facilities, and pursuit of alternative energy production and will hold to these high standards in all future endeavors.

LRI's Environmental Management System (EMS) at the County-owned facilities (at Purdy, Prairie Ridge, Key Center, and Anderson Island) is an expression of our commitment to utilizing the best management practices. Through our EMS, we review our operations and services periodically to set objectives and targets that will continually improve our environmental performance. The EMS helps LRI realize its commitment to pollution prevention and compliance with environmental regulations and our other environmental obligations.
